

**Triangle:** Output for the triangle oscillation of the LFO (direct without VCA).

**Sine:** Output for the sine wave of the LFO (direct without VCA).

**Sawtooth:** Output for the sawtooth oscillation of the LFO (direct without VCA).

**Square:** Output for the square wave of the LFO (direct without VCA).

**Out:** Output for the signal processed in the VCA (default: triangular oscillation of the LFO).

**Delay Out:** Control voltage output for the built-in attack envelope.
