

A-152 Addressed T&H/Switch

Dig Outs 1 to 8: Gate outputs that emit a gate signal when the level is active, 0V when the level is inactive.

T&H Outs 1 to 8: Outputs for the Track & Hold submodule.

SW I/O 1 to 8: Inputs or outputs for audio signals or control voltages. The 8 “SW I/O” sockets can be connected one after the other to the “O/I” socket via a trigger signal (“Clock In” input). Via control voltage (input “CV In”) also in arbitrary order.

Common Switches In/Out: Output or input for audio signals or control voltages. Internally, a trigger signal or control voltage is connected to one of the 8 “SW I/O” sockets.
